

My name is Ben Crawford, and I am currently the Superintendent for the Laconia Water Department. I completed the NH Water & Wastewater Managers School in November of 2021. Whether you are currently in a management position and are looking to improve your skills and abilities, or are aspiring to move up to a management position someday, this class will have something for you. As you would expect, this course covers the basics of management, but the unique part is that it is catered to water and wastewater utilities, making it a very beneficial course for those of us in those fields. Not only is it a very informative course, it also presents you with many networking opportunities through classmates, presenters, and instructors, any of which could lead you to that next great opportunity. This course is well worth it, and I would recommend it to anyone in these fields.

Ben Crawford
Superintendent, Laconia Water Department
NH Water & Wastewater Managers School class of 2021

If you are interested in applying for the next session of the NH Water & Wastewater Managers School, you can access the notice online here:
